

Facundo Radicich

AI & Data Automation | Python · SQL · LLMs · ERP Integrations · Analytics

Buenos Aires, Argentina (open to remote) · facundoradicich@gmail.com · linkedin.com/in/facundo-radicich-8b1931130 · Portfolio: facundoradicich.github.io/Portfolio

PROFESSIONAL SUMMARY

Founder and CEO with nine years of experience leading the commercial and operational management of a consumer goods company with nationwide B2B distribution. Led the sales and marketing teams and drove the company's digital transformation: CRM implementation, ERP migration and implementation and, in 2026, the development of data, automation and AI solutions now running in production. Background in Business Administration, advanced mathematics and statistics (Actuarial Science, University of Buenos Aires) and Data Science with machine learning. Focused on translating business needs into measurable technical solutions. Seeking a full-time role in applied AI, automation or data analytics.

EXPERIENCE

OH My Chalk! - Founder & CEO · Data & Automation Lead

Feb 2017 - Present · Buenos Aires

Paint company with 130+ products and B2B distribution across 18 provinces. With day-to-day operations delegated, focused on data and automation systems since 2026.

LEADERSHIP AND COMMERCIAL MANAGEMENT

- Managed the sales team, the network of independent sales brokers and the marketing team (up to 10 people).
- Implemented Pipedrive CRM (2018-2024) to manage the sales pipeline and customer portfolio. Analyzed 2,500+ opportunities and found that strategic accounts generated 20% of revenue with 6% of the sales effort, which led to a proposal for coverage by customer segment.
- Led and implemented the migration to Odoo ERP (2024), integrating sales, customers, accounting and production into a single system.

DATA, AI AND AUTOMATION

- **AI-powered order platform:** developed a FastAPI and Supabase (PostgreSQL) application, deployed on Render, that interprets handwritten orders through the Claude API (vision) and processes Excel and PDF orders. It manages invoicing, collections and commissions for 10 brokers, with authentication and role-based access control.
- **ERP integration:** developed Python integrations with Odoo (XML-RPC) that generate sales orders automatically, including customer identification by tax ID, price lists, discounts, tax handling and price-variance checks. Eliminated manual order entry.
- **Broker and customer management:** automated weekly account statements for each broker, with per-customer PDF reports, and repurchase alerts based on each customer's buying frequency.
- **Sales analytics:** built a sales dashboard on ERP data (by broker, region, product and customer) during a period of 88% half-over-half growth, and a lead-scoring model to prioritize 440 accounts with no purchases.
- **Production planning:** configured Odoo MRP with 132 bills of materials, a six-month demand forecast and reorder points, complemented by a Python simulation to prioritize production.

PROJECTS (code and demos in the portfolio)

- **Workshop marketplace:** web application in Next.js 16, TypeScript, Prisma and PostgreSQL for publishing workshops, with an instructor portal, user accounts and a map of approximately 550 points of sale whose data each store validates.
- **Customer churn prediction:** compared five classifiers (logistic regression, random forest, gradient boosting and a neural network) using cross-validation and ROC-AUC, and set the decision threshold based on business cost.
- **Personal expense management:** Streamlit application that extracts and classifies transactions from credit-card PDF statements of six financial institutions (pdfplumber, pandas, Plotly).

SKILLS

Data & ML: Python (pandas, NumPy, scikit-learn, matplotlib, pdfplumber), SQL, PostgreSQL, statistics, forecasting, classification models, Power BI, Excel

AI & automation: LLM APIs (Anthropic Claude, vision and text), prompt engineering, AI-assisted development, Odoo ERP (Sales, Accounting, Inventory, MRP), Pipedrive, Zapier, Make

Engineering: FastAPI, REST and XML-RPC APIs, Supabase, Next.js, TypeScript, Prisma, Streamlit, Git/GitHub, Render, Vercel

Management: team leadership, sales management, change management and digital transformation, sales psychology (cognitive biases), stakeholder communication

EDUCATION

Data Science & Analytics - Coderhouse · 2023 - 2024 · Python, statistics, machine learning, Power BI

Actuarial Science (coursework) - Universidad de Buenos Aires · 2017 - 2020 · Advanced mathematics, probability and statistics, financial mathematics

Bachelor's Degree in Business Administration - Universidad de Buenos Aires · 2014 - 2021

Sales and Cognitive Biases - Online course

LANGUAGES

Spanish (native) · English (full professional; Cambridge First Certificate, FCE)
